This listing of claims will replace all prior versions, and listings, of claims in the

application:

LISTING OF CLAIMS:

Claims 1-8 (canceled).

Claim 9 (previously presented): A two-dimensional photonic crystal surface-emitting

laser comprising:

a photonic crystal which has a photonic crystal periodic structure located in or near an

active layer which emits light when carriers are injected thereto, said photonic crystal periodic structure including a base medium and at least one medium defining lattice points, the base

medium and the at least one medium having different refractive indices in a two-dimensional

periodic array; wherein

said photonic crystal period structure is a substantially square lattice structure or a

substantially rectangular lattice structure; and

said photonic crystal period structure is classified into pg by a classification method

under IUC (International Union Crystallography in 1952).

Claim 10 (withdrawn): The two-dimensional photonic crystal surface-emitting laser

according to Claim 9, wherein the lattice points have a shape defined by a combination of

 $relatively\ large\ approximately\ circular\ portions\ and\ relatively\ small\ approximately\ circular\ portions\ approximately\ approximately\ approximately\ approximately\ approximately\ approximately\ approximately\$

portions.

Claim 11 (withdrawn): The two-dimensional photonic crystal surface-emitting laser

according to Claim 9, wherein the at least one medium defining each of the lattice points

includes at least two media having different refractive indices or a medium with a refractive

index distribution.

laser comprising:

Claim 12 (previously presented): A two-dimensional photonic crystal surface-emitting

a photonic crystal which has a photonic crystal periodic structure located in or near an

active layer which emits light when carriers are injected thereto, said photonic crystal periodic

structure including a base medium and at least one medium defining lattice points, the base

medium and the at least one medium having different refractive indices in a two-dimensional

periodic array; wherein

said photonic crystal period structure is a substantially square lattice structure or a

substantially rectangular lattice structure;

the lattice points are substantially triangular lattice points; and

said photonic crystal period structure is classified into pm, cm, or pl by a classification

method under IUC (International Union Crystallography in 1952).

Claim 13 (withdrawn): The two-dimensional photonic crystal surface-emitting laser

according to Claim 12, wherein the at least one medium defining each of the lattice points $% \left(1\right) =\left(1\right) \left(1$

includes at least two media having different refractive indices or a medium with a refractive

index distribution.
